CONTENTS

Preface ix

Special note of thanks xi

I. General overview

Nuclear matter under extreme conditions
G. Baym 3c

Thermodynamics of hot QCD
E. Braaten 13c

Crystalline color superconductivity
K. Rajagopal 25c

Heavy quarks and QCD matter
D. Kharzeev 39c

The color glass condensate
L. McLerran 49c

Equilibration in very high energy heavy ion collisions
A.H. Mueller 65c

Confinement: results and perspectives
A. Di Giacomo 73c

The QCD phase diagram, equation of state, and heavy ion collisions
E. Shuryak 83c

II. Finite temperature QCD

The entropy of the quark–gluon plasma
J.-P. Blaizot 99c

HTL quasiparticle picture of the thermodynamics of QCD
A. Rebhan 111c

Long-distance contributions to the QCD pressure
Y. Schröder 123c

Resummation of the QCD thermodynamic potential
A. Peshier 128c

Equation of state and other results of finite T lattice QCD with quarks
E. Laermann 134c

Thermodynamics with 2 + 1 and 3 flavors of improved staggered quarks
C. Bernard, T. Burch, S. Datta, T.A. DeGrand, C.E. DeTar, S. Gottlieb, U.M. Heller, K. Orginos, R.L. Sugar and D. Toussaint 140c

Thermodynamic properties of QCD with two flavors of Wilson-type lattice quarks
K. Kanaya for the CP-PACS Collaboration 146c

Tests of the Polyakov loops model
R.D. Pisarski 151c

Interplay between chiral transition and deconfinement
S. Digal, E. Laermann and H. Satz 159c

III. QCD with non-zero baryon number density

The ground state of strange quark matter
T. Schäfer 167c

Gauge invariance of the color-superconducting gap on the mass shell
R.D. Pisarski and D.H. Rischke 177c

Crystalline color superconductivity and high density effective theory
D.K. Hong 185c

Collective modes in color superconducting matter
I.A. Shovkovy 191c

Color superconductivity in QCD with 2 + 1 flavors
T. Fugleberg 196c

Transport theory and low energy properties of colour superconductors
D.F. Litim 201c

The lattice Fermi surface
S. Hands 206c

Solution of a complex action problem at non-zero chemical potential
U.-J. Wiese 211c

New class of compact stars at high density
E.S. Fraga, R.D. Pisarski and J. Schaffner-Bielich 217c

IV. Heavy ion collisions

Recent progress in computing initial conditions for high energy heavy ion collisions
A. Krasnitz, Y. Nara and R. Venugopalan 227c

Modified fragmentation function and jet quenching at RHIC
X.-N. Wang 238c

Initial state of the QGP from perturbative QCD + saturation
K.J. Eskola 249c

From quark–gluon plasma to hadron spectra
P.V. Ruuskanen 259c

Early thermalization at RHIC
U. Heinz and P. Kolb 269c

Statistical fluctuations as probes of dense matter
B. Müller 281c

Event-by-event fluctuations and the QGP
V. Koch, M. Bleicher and S. Jeon 291c

Quark number susceptibilities from lattice QCD
R.V. Gavai 299c

Strangeness and statistical QCD
J. Rafelski and J. Letessier 304c

Chemical equilibration of U(1) charged particles in a thermal environment
K. Redlich, V. Koch and A. Tounsi 326c

Statistical hadronisation phenomenology
F. Becattini 336c

Quarkonium formation at high energy
R.L. Thews 341c

High-mass dimuon and secondary charmonium production in ultrarelativistic heavy ion collisions
I.P. Lokhtin and A.M. Snigirev 346c

Nonequilibrium quantum fields and the classical field theory limit
J. Berges 351c

Out of equilibrium TFT—energy nonconservation at vertices
I. Dadić 356c

Nonlinear constraints from non-Abelian internal symmetries
L. Turko 361c

List of participants 367c

Author index 375c
